

## **Recyfuel support biodiversity**

Through the nature of its activity, Recyfuel is daily concerned by its employees and neighbors' safety and wellness and by protection and preservation of environment.

In June 2012, it was thus obvious to the Management team to become a partner in the bee hive reintroduction in the Engis industrial estate proposed by BeeCity. Bees have a crucial role in maintaining and developing biodiversity. The reduction of natural areas represents a very serious brake on their benefic action which negative effects are already visible in the flora quality and in the decreasing of the bee hive populations.

With some other partners, Recyfuel is proud to participate to the inversion of that trend by sponsoring the implanting of a bee hive in its neighborhood. The hope is to make the populations of those sympathetic insects grow again and to enable them to energize and diversify flora again to reinforce the biotope quality.

For our planet !
